Now you can attractively and securely enclose information printed on standard 8 1/2" x 11", 8 1/2" x 14" in our super tough steel sign holders

Features:

- ✓ Made of weatherproof, powder coated STEEL for super-strength and durability. Aluminum signs can get stolen for their scrap value, and are not as strong.
- ✓ Resists attack from thrown rocks, bricks, punches, pulls, kicks, bats and knives. Your info will stay in place!
- ✓ Perfect new way to display notices, news, advertisements & promotions - in harsh outdoor or indoor environments.

Easy swing-open stainless steel hinge for quick and convenient material changes

8 1/2" x 14" size sign

- ✓ Public bus authorities: increase bus usage and revenue by posting schedules, maps, hours of operation at bus stops - that you can easily change in seconds.
- ✓ Cities, schools, towns, villages: Post important information about your local events - festivals, laws, points of interest.
- ✓ Can be customized to your size, color, material. Stock sizes available.

Armor Sign wall mount and pole mount Instructions

Specifications:

Insert Size: 8 1/2"x 11" standard sheet

Outside dimensions of sign: 13 1/4"x 10 3/4"

Thickness: 1/2" Weight approx. 7 lbs.

Insert Size: 8 1/2"x 14" standard sheet

Outside dimensions of sign: 16 1/4"x 10 3/4"

Thickness: 1/2" Weight approx. 8.5 lbs.

Printing guidelines, margins on insert:

Minimum 5/8" (.625") margin on top, bottom,

left and right sides of insert. Sheets must

be laminated for outdoor use.

Wall Mounting

Sign can be mounted to drywall, concrete, wood, steel walls using any style no. 8- (DIA .164") up to DIA 1/4" screw or bolt. Mounting holes on sign are DIA .26". Install screws through inside back of sign. After sign is closed, access to mounting screws is hidden. Rubber spacers are not necessary for wall.

Pole Mounting

Sign can be pole mounted. We highly recommend that you use our "Flex-Mount™" rubber spacers. These spacers act as a "shock absorber" between the sign and

the pole to absorb any strikes to the sign. Also, they keep the sign away from the pole to prevent water from running over the sign. Mount the rubber spacers onto the sign back plate by using the plastic binding screws. See diagram below.

To mount sign to pole, you can use worm drive hose clamps or permanent mount steel strapping. Feed strapping through the 2 slots on back plate. You can use up to 7/8" wide steel strapping. When you tighten straps, rubber spacer will be compressed.

To install your Insert/Sheet

Slide your insert in back of the glass or plastic sheet. Check from front to see that your insert is positioned correctly.

Close sign. Foam pad keeps insert tight against glass and prevents fogging in high moisture conditions.

To keep sign closed, you can use any DIA 1/4"-20 x 1/2" long screws or bolts. Button-head tamper resistant screws are best to prevent tampering.

Armor Sign is the most efficient, economical and attractive way to *post and quickly change* information in the harshest environments: ... industrial facilities, factories, pipelines, city streets, schools, parking lots/garages, public facilities, anywhere. Built to last and endure under all conditions. **SUPER TOUGH!**
